

## DISCLAIMER CAR CHARGING STATION

I hereby confirm that I charge my electric vehicle on my own responsibility at your premises without using a charging station provided for this purpose (using a conventional power connection provided by Projekt Spielberg GmbH & Co KG). I assume sole responsibility for any damage to the electric vehicle, to persons or to structures or other incidents related to and/or resulting from the use of the e-charging station and undertake to fully indemnify and hold Projekt Spielberg GmbH & Co KG harmless – also from claims of third parties. As the owner of an electric vehicle, I am aware of the possible risks.

The rated voltage frequency is 50 Hz, the rated voltage 230V (single-phase) resp. 400V (three-phase), which is shown at the charging station.

I commit myself to use the car charging station in a way that does not cause any damages to Projekt Spielberg GmbH & Co KG and does not endanger myself or others. Therefore, I particularly commit myself to:

- take care for a secure connection of the electric vehicle to the charging station,
- use an undamaged cable with suitable and secure connectors,
- to park the electric vehicle in a way, that the connection to the charging station is as short and safe as possible, but the minimum distance to other buildings of 6 meters is maintained,
- not charge my electric vehicle indoors (i.e. Box/Garage) nor to install a charging station (Wallbox),
- take care, that third parties are not obstructed by the charging cable,
- be independently responsible for compliance with the applicable technical regulations regarding the electric vehicle and the charging cable, as well as
- to comply with all electronic protection regulations.
