### PART III: MECHANICAL INSPECTION

The time limit for this part of the inspection is 75 minutes. Continuation of the inspection is possible after requeueing. During technical inspection all work carried out on the vehicle must be approved by a technical inspector.

#### ☐ TIS STATUS UPDATE

► Set online TIS status to Present

### ☐ VEHICLE WITH TALLEST DRIVER READY TO RACE

- 22 FIRE EXTINGUISHERS Two (2) hand-held, 0.9 kg (2 lb.) minimum, dry chemical (10BC, 1A10BC, 34B, 5A 34B, 20BE or 1A 10BE), with pressure/charge gauge, Aqueous Film Forming Foam (AFFF) fire extinguishers are prohibited, 1 WITH VEHICLE securely installed on push-bar, 1 in paddock. (Must see BOTH at Tech.). On-board fire system possible.
- 23 O PUSH BAR (red color) With vehicle, securely attached to vehicle, detachable, push & pull function for 2 people standing erect. The push bar must be attached to the rear of the vehicle for moving it.
- 24  $\Delta$  GROUND CLEARANCE At least 30 mm min. with driver.
- 25  $\Delta$  CAMERAS Must be secured by two points, see T13.5. No cameras mounted to helmet.
- 26 VISIBILITY Minimum of 100 deg. field either side. Head rotation allowed or mirrors. If mirrors, must be firmly installed and adjusted
- 27  $\Delta$  VEHICLE CONTROLS All controls, including shifter, must be inside cockpit. No arms or elbows outside the SIS plane.
- 28 ORIVER FLUID PROTECTION A firewall (rigidly mounted cover plate for cooling systems using plain water)must extend sufficiently far upwards and/or rearwards such that any point, less than 100mm above the bottom of the helmet of the tallest driver, is not in direct line of sight with any of the following parts: fuel system, engine oil system, cooling system and low voltage battery.
- 29 O ROLL BAR PADDING Roll bar or bracing that could be hit by driver's helmet must be covered with 12 mm thick, SFI spec 45.1 or FIA 8857-2001 padding.
- 30  $\Delta$  OTHER SIDE TUBES Design prevents driver's neck hitting

bracing or other side tubes

- 31 O **HEAD RESTRAINT** Near vertical. Must take 890 N load. 40 mm thick, SFI 45.2 standard. Max. 25 mm from helmet. Helmet contact point 50 mm min. from any edge. May be changed for different drivers. Minimum 150x150mm.
- 32 ORIVER RESTRAINT HARNESS SFI 16.1, SFI 16.5, FIA 8853/98 or FIA 8853/2016. 6- or 7-point system Two-piece lap belt (min. width 50mm), two shoulder straps (min. width 75mm) and two leg or anti-submarine straps (min. width 50 mm). (7-point system must have three anti-submarine straps). Must be securely attached to prim. structure (25,4x2,4 or equal.)
- 33 AP BELT MOUNTING Must pass over pelvic area between 45 - 65 deg. to horizontal for upright driver, 60-80 deg. for reclined. The lap belts must not be routed over the sides of the seat. Pivoting mounting with eye bolts or shoulder bolts attached securely to Primary Structure. Min. tab thickness 1,6 mm. Attachment brackets to the monocoque must be steel, see T5.3.2.
- 34 O SHOULDER HARNESS MOUNTING Mounting points 180 230 mm apart (measured center to center). Angle from shoulder between 10 deg. up and 20 deg. down to horizontal. Attach to Primary Structure 25,4 x 2.4 mm or 25.0 mm x 2.5 mm steel tube min. NOT to put bending loads into Main Hoop Bracing without extra bracing. Additional braces if not straight to main hoop. Cannot pass through a firewall. Attachment brackets to the monocoque must be steel.
- 35 O SUSPENSION Fully operational with dampers front and rear; 50mm minimum wheel travel (minimum jounce of 25mm) with driver in vehicle.

### ☐ VEHICLE WITHOUT DRIVER

- 36  $\Delta$  TECH STICKER SPACE 45 mm x 175 mm on centerline of front of vehicle in front of the cockpit opening
- 37  $\Delta$  SCHOOL NAME & OTHER DECALS School Name, or recognized initials 50 mm tall min (all letters). on both sides in Roman letters. Must be clearly visible.
- 38  $\Delta$  VEHICLE NUMBERS On front & both sides of vehicle, minimum 150 mm tall, 20 mm stroke & spacing, 25 mm min. between number and background edge, Black on White, White on Black only, specified background shapes. Must be clearly visible.
- 39  $\Delta$  BODYWORK EDGES edges that could contact a pedestrian must have a minimum radius of 1.0 mm (safety requirement)
- 40  $\Delta$  BODY & STYLING Open wheeled, open cockpit, formula style body. Vertical keepout zones 75mm in front and behind tires (no aero exceptions), tires unobstructed from sides.
- 41 O BODYWORK Min. 38 mm radius on nose. No large openings in bodywork into driver compartment in front of or along-side driver, (except cockpit opening).
- 42 AERODYNAMIC DEVICES Securely mounted. The deflection may not exceed 10 mm when a force of 200 N is applied over a surface of 225 cm<sup>2</sup> and not more than 25 mm with a point force of 50 N is applied.
- 43 A AERODYNAMICS ALL aerodynamic devices maximum 250 mm rearward of rear tires, maximum 700 mm forward of front tires. Devices lower than 500 mm from the ground rearward of the front axle must be no wider than vertical plane from the outside of the front and rear tires. Devices higher than 500 mm behind the front axle must not be wider than the inside of the rear tires. No power ground effects.

- 44  $\Delta$  AERO VERTICAL HEIGHT Devices forward of a vertical plane through the rearmost portion of the front face of the driver head restraint support, excluding any padding, set to its most rearward position, must be lower than 500 mm from the ground. Rear device max 1.2 m above ground (incl. end plates); Front device max 250 mm above ground outside of the inside plane of the front tires inside this plane max 500 mm
- 45 O EDGES/RADII Edges that could contact a pedestrian must have a minimum radius of: horizontal leading edges min 5 mm; vertical forward facing edges min 3 mm. All other edges must have a minimum radius of 1.0 mm
- 46 AIR INTAKE SYSTEM ROLL OVER PROTECTION All parts of air intake system (including throttle body or carb, air intake ducting, air cleaner & air box) must be within a surface defined by the top of the main hoop and the outside top edge of the tires.
- 47 AIR INTAKE SYSTEM Must be supported if cantilevered (isolated to frame, rigid to engine). Any portion < 350 mm above ground must have Side Impact protection to rule CV 1.3.2. Intercooler after throttle body.
- 48 \( \Delta \) SEAT Insulated against heat conduction, convection and radiation. Lowest point no lower than top of of the upper surface of the lowest SIS member OR must have longitudinal, 25.4 x 1.65mm steel tube underneath.

COMBUSTION - copy for Formula Student Germany

- 49 COCKPIT OPENING Fig. 11 (left) template passes down from above cockpit to below the upper side impact member. Steering wheel, seat & padding can be removed. No removing of firewall.
- 50 OCCKPIT INTERNAL CROSS SECTION Fig. 11 (right) template passes from the cockpit opening to 100 mm rear of rearmost pedal contact area (in most forward position). Steering wheel and paddings can be removed (without tools).
- 51  $\Delta$  STEERING WHEEL Continuous perimeter, near round (no concave sections) with driver operable quick disconnect. 250mm max from front hoop.
- 52 O FUEL SYSTEM ROLL OVER PROTECTION All parts of the fuel storage, supply and fuel control system systems (including fuel rail, throttle body or carburettor), must lie within a surface defined by the top of the main hoop and the outside top

- edge of the tires
- 53 O FUEL FILLER NECK Min. 35 mm dia., within 30° of vertical. Fuel resistant, transparent sight tube or transparent filler neck (material must be rated for at least 120° C). min 125 mm vert. height visible to fueler with vehicle fully assembled, with non-moveable fuel level line 12-25 mm below top of sight tube. Sight tube must NOT run below top of tank. Must prevent fuel spillage contacting driver, exhaust or ignition. Fueled w/o manipulating vehicle in any way. Cap secure and capable of withstanding pressurization (ie: threads or latch.)
- 54  $\Delta$  **REFUELING** must be able to be accomplished without the removal of any body parts of the vehicle.
- 55 O FUEL VENTS Must exit outside of the bodywork, and have a check valve to prevent leakage if vehicle inverted.

#### ☐ REMOVE BODY PANELS

- 56 ORIVER'S LEG PROTECTION Covers inside of cockpit over any sharp edges or moving suspension / steering components.
- 57 ORIVER'S FOOT PROTECTION Feet must be rearward of the Front Bulkhead and no part of shoes or legs above or outside the Major Structure (25x1.2 or equivalent) in side or front views when touching the pedals.
- 58 O PERCY Helmet of 95th percentile male (PERCY) to be 50 mm below the lines between top of front and main roll hoops and between top of main hoop to rear attachment point of main hoop bracing. Center of bottom circle placed minimum 915 mm from pedals.
- 59 BRAKES Dual hydraulic system & reservoirs, operating on all four wheels, (one brake on limited slip differential is OK). System must be protected by structure or shields from drivetrain failure or minor collisions. No plastic brake lines. No brake-by-wire. No parts below chassis in side view. Brake pedal capable of 2000N, no failures if official exerts max force (seated normally in vehicle).
- 60  $\Delta$  BRAKE OVER TRAVEL SWITCH In the event of a failure in one or both of the brake circuits the brake pedal over travel will result in the shutdown circuit being opened.
- 61  $\Delta$  LOW VOLTAGE MASTER SWITCH Must be located on the right side of the vehicle, in proximity to the main hoop, at the 95th percentile male driver's shoulder height, in the middle of a completely red circular area of  $\geq 50$  mm diameter. Marked with LV and international symbol. Level horizontal when in ON position.
- 62 TUBING & MATERIALS Team must show an APPROVED SES. No Magnesium tubes in primary structure.
- 63 O MONOCOQUE Must see laminate test specimen. Steel backing plates (>2 mm thick) used at attachment points.
- 64 O BOLTED JOINTS in primary structure Distance hole centerline to the nearest free edge > 1.5 x hole diameter.
- 65 MAIN HOOP MUST BE STEEL. Check dimension as shown in approved SES. Must be made of one piece and extend to lowest frame member. Above Major Structure, must be within 10 deg. of vertical plane. Smooth bends without wrinkles.
- 66 MAIN HOOP BRACING MUST BE STEEL. One straight brace on each side. Dimension as shown in the approved SES. Attached within 160 mm from the top. Min. 30 deg. included angle with hoop. If main hoop is not vertical, bracing must not be on same side of the vertical plane as the main hoop. No bends. No rod-ends. Proper design for removable braces (capping etc.) on BOTH ENDS. Must take load back to bottom of main hoop and node of upper side impact tube through proper triangulated structure. (25.4 mm x 1.2 mm or equivalent)
- 67 FRONT HOOP Must be closed section metal tube. Can be multi-piece with gussets or additional attachments to the

- monocoque. Must extend down to lowest frame member. No lower than top of steering wheel. Max. 20 deg. to vertical. Check dimension as shown in approved SES.
- FRONT HOOP BRACING Two straight forward facing braces, 25.4 x 1.65mm or 25.0 x 1.75mm or 25.4 x 1,6mm wall steel or equivalent, attached within 50 mm of top. Extra rearward bracing required if Front Hoop leans backwards more than 10 deg.
- 69 SIDE IMPACT PROTECTION Min. of 2 tubes + diagonal must connect the main and front hoops in straight line. Upper tube must be between 240 mm and 320 mm above lowest inside chassis point between FH and MH. Lower tube can be lower frame member. At least one diagonal per side must connect the upper and lower members between the main and front hoops. Dimension as shown in approved SES.
- 70 FRONT IMPACT PROTECTION No non-crushable objects forward of bulkhead. IMPACT ATTENUATOR forward of bulkhead, 200mm long x 200mm wide x 100mm high. No wing supports through the IA. IA must be securely fastened directly to AIP capable of taking transverse & vertical loads (no tape, etc.) Test piece presented and same as IA on vehicle. Standard IA: Requires diagonal brace if bulkhead >1" from IA on any side.
- 71 ANTI INTRUSION PLATE A 1.5 mm solid steel metal or 4.0 mm solid aluminium metal sheet (same size as outside dims.) must be welded or min. 8 screws M8 Grade 8.8 (critical fasteners T10). CFRP plate is accepted if SES approved.
- 72 FRONT BULKHEAD SUPPORT Support back to front roll hoop; 3 tubes per side, all 25 mm x 1.5 mm wall steel tube or equiv. 1 bottom; 1 top within 50 mm of top of bulkhead, and connecting within 100 mm above and 50 mm below upper SIS tube; 1 or more node-to-node diagonal to completely triangulate connections to upper and lower SIS tubes.
- 73 O INSPECTION HOLES 4.5 mm inspection holes required in non-critical areas of front & main hoops. Inspectors may ask for holes in other tube(s).
- 74 QUICK JACK (red color) One device must be available to lift up all driven wheels min. 100 mm above the ground. Lifting the car must be possible by one person. In lifted position the quick jack must be locked/secured and function without the support of a person or additional weights.
- 75 WHEELS 203.2 mm (8") min. diam. No Aluminium or hollow wheel bolts. Single retaining nut must incorporate a device to retain the nut. Aluminum wheel nuts must be hard anodized.
- 76 FIREWALL Fire resistant material; must separate driver compartment from cooling, oil system & LV battery. Pass-throughs OK with grommets. Multiple panels OK if gaps sealed. No gaps at sides or bottom. Must be rigidly mounted to the chassis. Material must meet UL94-V0, FAR25 or equivalent.

COMBUSTION - copy for Formula Student Germany

#### ☐ VEHICLE LIFTED AND WHEELS REMOVED

- 77 SUSPENSION PICK-UP POINTS Inspected thoroughly for integrity.
- 78 FASTENERS Steering, braking, harness and suspension systems must use SAE Grade 5 or Metric Grade M8.8 or higher specs (AN/MS) with visible positive locking mechanisms, no Loctite or lock washers. Minimum of 2 exposed threads with locking nuts. Rod ends in single shear are captured by a washer larger than the ball diameter. Adjustable tie-rod ends must have jam nuts to prevent loosening. No Nylon lock nuts for Brake calipers or Brake discs. No button head cap, pan head or round head screws in critical locations, e.g cage structure or harness mount. Primary structure e/D > 1.5.
- 79 STEERING All steerable wheels must have positive stops placed on the rack to prevent linkage lock up or tires from contacting any part of the vehicle. 7 degrees max. free play at the steering wheel. NO STEER-BY-WIRE on front wheels. Rear wheel steering, max. 6 deg. and mechanical stops installed. No bonded joints in steering column.
- 80  $\Delta$  FLOOR CLOSEOUT PANEL Required from foot area to firewall; solid, non-brittle material; multiple panels are OK if gaps less than 3 mm.
- 81 O **ENGINE** Four cycle piston engine. No hybrids. Waste heat recovery allowed.
- 82 ON-BOARD STARTER Required.
- 83 O COMPRESSORS Turbo or super chargers allowed if not OEM to engine; must be between restrictor and throttle. Carburetors are not allowed, if compressors are used. Compressor recirculation valves are ok if located downstream of restrictor
- 84 O INTAKE MANIFOLD Securely attached to block or head with mech. Fasteners (positive locking!). OEM type rubber bushings not sufficient.
- 85 O RESTRICTOR Must be circular; max. diam. 20.0 mm for gasoline fuelled vehicles and 19.0 mm for E85 fuelled vehicles. Cannot be movable. Placed before compressor.
- 86 THROTTLE Must have minimum of 2 springs (1 spring when ETC installed) at the TB, each capable of closing the throttle independently. TPS not acceptable as a return spring. Cable must have smooth operation with no binding or sticking; min. 50 mm from any exhaust component.
- 87 C THROTTLE PEDAL Must have positive stop to prevent overstressing cable
- 88 O ENGINE LUBRICATION SYSTEM The lowest point of the engine lubrication system must be no lower than the lowest frame part. Otherwise protection structure mounted to chassis necessary.
- 89 GAS CYLINDERS Proprietary manufacture & labeled, Non-flammable gas, regulator on tank, securely mounted, axis not pointed at driver, within the frame envelope, or in structural side pod, but not in cockpit, insulated from exhaust, appropriate lines & fittings. Positively retained, i.e. no tie-wraps.
- 90 SCATTERSHIELDS GENERAL Required for clutches, chains, belts, etc. No holes. 6 mm diam. Grade 8.8 minimum. End parallel to lowest part of the sprocket/pulley in front and rear.
- 91  $\Delta$  SCATTERSHIELD MATERIALS For chains, 2 mm min. thick

- solid STEEL,  $3 \times 1$  chain width. For belts,  $3 \times 1$  mm min. thick Al 6061-T6,  $3 \times 1$  belt width. Finger guards: cover all drivetrain parts that spin while vehicle is stationary. No holes >12 mm dia.
- 92 LV BATTERY Rigid and sturdy casing and attached securely to frame or chassis. Battery behind firewall; wet-cells in IPX7 rated and acid resistant casing if inside cockpit. Must be contained within the rollover protection envelope, see T1.1.15. Grounded to chassis; hot terminal insulated; protected for short circuits (fused). No circuits >60 VDC.
- 93 O # STUDENT BUILD LV BATTERY Proper Insulation of internal connections; proper mounting of cells
- 95 O HIGH PRESS HYDRAULICS Pumps and lines must have 1 mm steel or aluminium shields protecting driver and workers.
- 96  $\Delta$  COOLANT 100% water. NO ADDITIVES WHATSOEVER.
- 97 CATCH TANKS Any coolant overflow or lube system vents must have separate catch tanks. 0.9 I minimum each, 100 deg. C material, behind firewall, below shoulder level. 3 mm min. dia. vent away from driver down to the bottom level of frame. Trans or diff., cooling systems using plain water, unless sealed, requires 100 ml catch bottle.
- 98  $\Delta$  FLUID LEAKS Oil, grease, coolant,fuel, Brake fluid -> none permitted
- 99 FUEL RAIL Securely attached to block (no nylon nuts), head or int. manifold with brackets & mech. Fasteners (grade min. 8.8). Plastic, carbon fibre or rapid prototyping flammable materials are prohibited.
- 100 FUEL TANKS Must lie within major structure of the chassis with full side impact protection & firewall between fuel supply & driver, min. 50 mm away from exhaust components. Rigid tanks cannot carry structural load & must be flexibly mounted. Bladders or bags in rigid container allowed.
- 101 BELLYPANS Enclosed chassis structures and structures between the chassis and the ground must have two venting holes of at least 25mm diameter in the lowest part of the structure to prevent accumulation of liquids. Additional holes are required when multiple local lowest parts exist in the structure.
- 102 FUEL LINES No plastic lines between fuel tank & engine. Fuel injection systems must use metal braided hose with threaded fittings or reinforced rubber hose with approved clamps. Must be securely attached and protected from possible rotating equipment or collision failure. No plastic connectors in fuel line. High pressure injection systems see CV 2.5.2
- 103 BRAKE LIGHT Only one RED brake light, clearly visible from the rear; on vehicle centerline; height between wheel centerline & driver's shoulders. Round, triangle, or rectangular on black background. 15 cm2 minimum illuminated area. LED strips OK if elements closer than 20 mm apart and total length > 150 mm.
